**SUBJECT: INTERNSHIP CERTIFICATE**

This is to certify that **Karthik Venkataramana Gunturi**, worked as “**Project Intern**” and has successfully completed a **1.5 months** technical internship from **1<sup>st</sup> June 2022 to 15<sup>th</sup> July 2022** with RPA2AI Research and Advisory Services.

**Details of the internship**

**Project Title:** AI for Good: Inclusivity

**Project Supervisor:** Karthik worked under the direct guidance of Kashyap Kompella, CEO of RPA2AI Research. Kashyap is also a visiting faculty on transformative technologies at the Institute of Directors, New Delhi and a visiting professor for AI at BITS School of Management (BITSOM), Mumbai.

**Project Description:** This project explores the lack of diversity of gender, ethnicity, race and age in various fields by calculating the inclusivity score of different teams and groups. The use of machine learning tools for automated gender detection and the challenges and issues involved were studied. A prototype application that automatically calculates an inclusivity score by parsing web and PDF documents was developed using Python and also as a Chrome browser extension.

During the course of the project, in addition to improving and applying his existing technical skills, Karthik gained exposure to best practices of product management, project scoping and documentation, API-first software development, Principles of Responsible AI, AI ethics considerations, user experience principles and most importantly, the need for diversity and inclusion.

Karthik’s performance on this project has been excellent and exceeded expectations. Please see the accompanying feedback form for a detailed assessment on 12 parameters. We welcome an opportunity to engage with him again in the future.

Wishing Karthik all the best and much success in his future endeavours.

With Regards,

For RPA2AI Research

### Work Experience Certificate

August 05, 2022

To Whom It May Concern,

I am pleased to inform you that **Mr. Lalit Rajput** worked as React Frontend Developer Intern at BeyondExams - a section 8 non-profit. He started his internship on April 27, 2022, and continued to do so till July 31, 2022. During this period, he worked closely with BeyondExams' Product Team and was personally mentored by me.

During his internship, Lalit's work involved replicating advanced UI/UX design in React, integrating backend APIs and coming up with out-of-the-box solutions to complex technical problems. He also made significant contributions during the brainstorming sessions with the Product Team.

Lalit has shown tremendous potential to grow during his internship period and his ability to quickly adapt to changing circumstances and work methodology has been impressive. He is very hard-working and I am confident that he can learn, adapt and accomplish any task he puts his mind to.

Should you require any further information, please do not hesitate to contact me via email at [pankaj@beyondexams.org](mailto:pankaj@beyondexams.org).

This is to certify that Mr. Ritik Bhasarkar has successfully completed his internship in **Full Stack Development** with the Technical Team at [WorqHat](#), from 06<sup>th</sup> June 2022 to 24<sup>th</sup> August 2022, and has successfully completed 240+ working hours with us.

It is with great pleasure that I endorse Ritik for working with us and excelling in his work. He played an important role as he worked on building a File and Document Management System that can be added as a component to our No-Code Automation System. He worked on the Tech Stack of HTML, CSS, EJS, and JavaScript and has used NodeJS as the Server-Side Language and Firebase Firestore as the NoSQL Database.

During his tenure, he demonstrated really good Program Development Skills with a self-motivated attitude to learn new things. His performance exceeded our expectations and was able to complete all his assigned tasks on time. I am sure he will be a great addition to any team or any individual role he takes up and will excel at his work.

We wish him success in all his future endeavours and would be happy to provide any information about him, as a reference check, if required, to assist him in the career growth, that he deserves.

Dear Mr. MULAY,

We are pleased to confirm that you have been selected to carry out your Mitacs Globalink Research Internship entitled *Grinding of Inconel 718 superalloy and its effect on the fatigue life*, at ÉTS – École de technologie supérieure, as part of your undergraduate studies at MIT Academy of Engineering.

Your internship will take place from 06/06/2022 to 26/08/2022, full-time (40 hours/week) under the supervision of Professor Bocher, Philippe, at the Mechanical Department. This experience is intended to further your educational training and pursuit of your undergraduate degree. You have been awarded a scholarship through the MITACS Globalink research Internship Program (refer to your MITACS confirmation letter). You will be hosted at ÉTS as a visiting research student. No tuition fees will be charged. You will be exempt from paying ÉTS insurance fees, as Mitacs provides all Globalink Research Interns with comprehensive insurance.

MITACS Globalink Research Interns are considered to be highly-qualified researchers; Mitacs' Award Letter contains all the information you require to demonstrate eligibility when you undergo border inspection at the time of entering Canada. Under the Global Skills Strategy, you will not need to apply for a work permit, as you are invited at ÉTS for fewer than 120 days. You may still need to apply for a visa or an eTA. For more information, refer to Immigration, Refugees and Citizenship Canada website: [Short-term \(120-day\) work permit exemption for researchers](#) or contact [helpdesk@mitacs.ca](mailto:helpdesk@mitacs.ca).

Upon arrival at ETS, you must present your invitation letter, your passport and the proof of your insurance coverage at the Registrar's Office in order to complete your registration. You will not be allowed to extend your stay once you are in Canada.

We are looking forward to welcoming you to ÉTS.

Project Title: Thermoelectric Refrigerator

## Things Happening Around Product Concept

Refrigerator are used to store food items(vegetables, fruits, etc.) which require mild temperature around 10-20 degree Celsius .

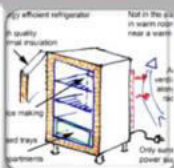

Refrigerator is also used to make ice, to store ice creams, jellies, etc. That require a temperature of around -2 to 0 degree Celsius .

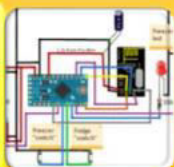

Some people like doctors, Chemists, etc need refrigerator to store various chemicals, medicines, etc . That requires a customize temperature control system.

People uses mini refrigerators in cars which runs on 20V DC and take power from car battery.

Its is possible that electricity cut off in some areas, so refrigerators should have a good heat insulation to retain that cold temperature without consuming electricity.

If refrigerator doesn't have a multi compartment system then it should have different modes selection system , to store various items .

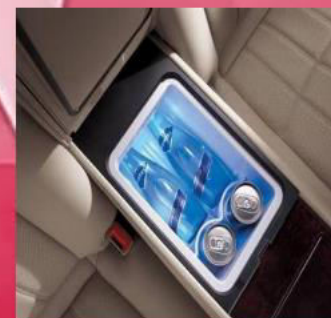

### STORAGE GROUPS

Store chemicals in separate secondary containment and cabinets.

- A Compatible Organic Solvents
- B Compatible Phosphoric & Water Reactive Materials
- C Compatible Inorganic Bases
- D Compatible Organic Acids
- E Compatible Oxidizers including Peroxides
- F Compatible Inorganic Acids not including Oxidizers or Combustible
- G Not Intrinsically Reactive or Flammable or Combustible
- J\* Poison Compressed Gases
- K\* Compatible Explosive or other Highly Unstable Material
- L Non-Flammable and Combustible, including solvents
- X Incompatible with A-L, other storage groups
- X\* Incompatible with A-L, other storage groups

\*Storage Groups J, K, and X: Consult EHS Department. For specific storage, consult manufacturer's MSDS.

If space does not allow Storage Groups to be kept in separate cabinets the following scheme can be used with extra care taken to provide stable, uncrowded, and carefully monitored conditions.

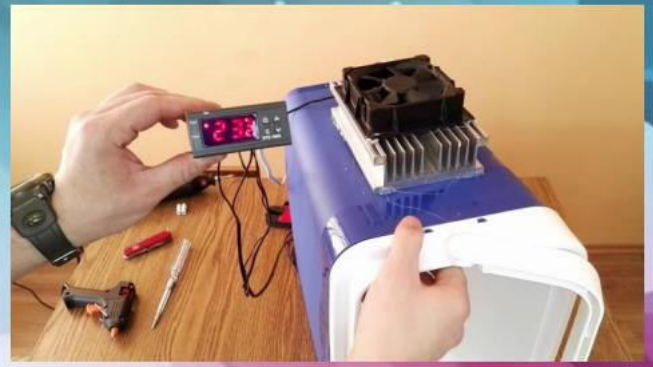

Its good if the refrigerator has its exhaust in the top portion so that it can be easily placed near the corners of the house without causing any heating issues.

Many refrigerator has a battery backup system, and a smart switching circuit which switches to backup when the electricity supply cut off.

## Effect of Activity on Product, Special Notes

It can be operated at 20V DC and 220V AC mains supply.

It can achieve temperatures below 0 degree Celsius, and it cool at a much higher rate.

Its affordable, its small in size (3.5Ltr), and it is light weight hence can be carried out anywhere you go

Our prototype can itself retain its temperature for half an hour without consuming power.

It has a smart logic system which cuts-off power when the temperature is reached and start again when the temperature starts dropping.

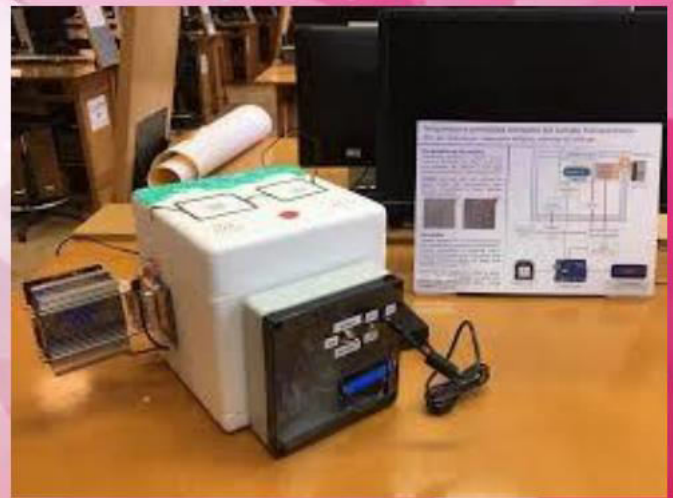

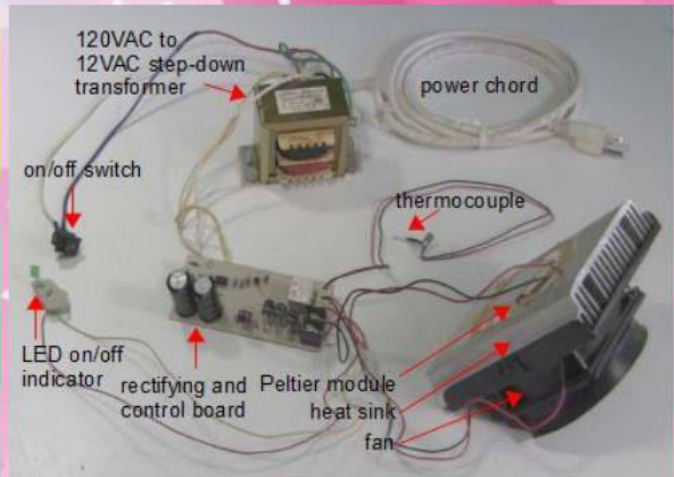

It has various modes, which works on various temperature each for different type of products like fruit mode, ice mode, cold drink mode, etc.

It consists of a 12V battery, and a Atmega 328p microprocessor for switching process.

Its exhaust fan is placed at the top of the refrigerator and supports a wind flow from east to west direction when seen from front.

2<sup>nd</sup> ATTEMPT

Project Title: Thermoelectric Refrigerator

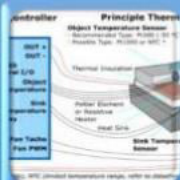

Effect of Season, Time, Personal, Location for Product

Cannot be used outside(under direct sunlight) .

Cannot be used for things which require temprature less than -5 degree celsius.

Easy to operate and fully automated.

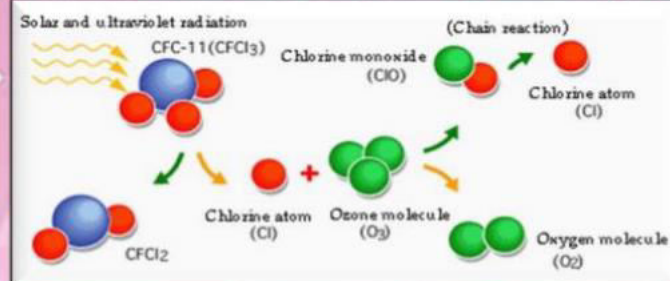

Small in Size i.e.Requries Less Space

Can be used Anytime for any amount of duration.

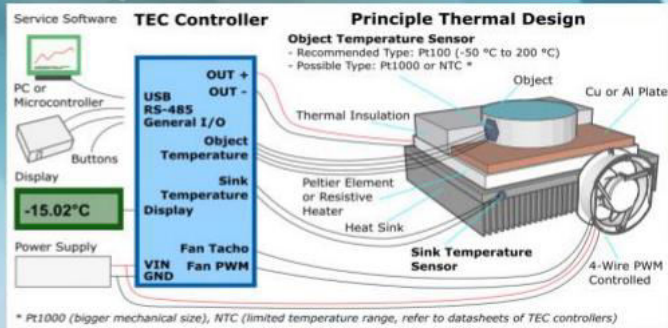

Its Exhaust should not be placed facing a wall.

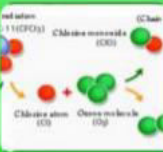

Spilling water inside it may cause some problem to the insulation of the body.

## Precautions in Product/Process to avoid Environmental Impact

Its door is made such that ,on opening the door the cool air stays inside the refrigerator.

As it doesn't require CFC coolant for cooling hence it helps to protect ozone layer and reduce carbon footprint .

It does save energy as it switches on and off on its own after achieving the required temperature.

We have used a waterproof temperature sensor, so that if there is high humidity it won't damage the sensor.

We have made it so that it can run a decent amount of time using a car battery.

The Exhaust used in it is very quiet therefore our refrigerator produces almost no noise.

We have added a small fan inside it to spread the cold air throughout the refrigerator for uniform cooling.

We have used XPS as material for the body of our refrigerator as it is a very good insulator of heat.

User Expectations about the Product

It should be Affordable, Light weight and Efficient.

It can be powered with A.C. and as well as D.C. supply, So it can be used in cars and Mobile Homes.

It should be Consumer friendly (Mostly Automated and easy to use).

It should be able to reach temperature below 0 degree celcius. For better cooling and storing of Chemicals and Medicines.

It should work for a longer period of time without Maintenance.

It should have analog temperature Control, So that user can adjust Temperature we want.

A screenshot of a Google Meet session. The main window displays a presentation titled "Thermoelectric Refrigerator" with various slides and images. The presentation content includes:

- Refrigerator is also used to make ice, to store ice creams, jellies, etc. That require a temperature of around -2 to 0 degree Celsius.
- Some people like doctors, Chemists, etc. need refrigerator to store various chemicals, medicines, etc. That requires a customized temperature control system.
- Medical grade mini refrigerators in cars, which runs on 24V DC and take power from car battery.
- It is possible that electricity cut off in some areas, so refrigerators should have a good heat insulation to retain that cold temperature without consuming electricity.
- If refrigerator doesn't have a multi compartment system then it should have different heat exchanger.

The presentation also includes a "STORAGE GROUPS" section with images of various food items. The bottom of the screen shows the Google Meet interface with two participants: "You" and "Utkarsh kanawade". The meeting details at the bottom indicate that Utkarsh kanawade is presenting.

It should have a decent amount of storage(8Ltrs) While being Portable.

Its parts should be easily available in market so that Consumer don't face any problem in case of replacing the product.

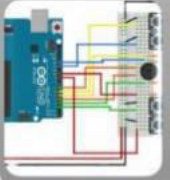

## Summary of Interaction

Our product can be powered by DC as well AC supply.

It is affordable, light weight, efficient and consumer friendly

It has smart electronic system which is powered by mini computer present inside it

It cannot go below -10 degree C .For Even lower temperature the cost will increase.

All the parts present in the product are easily available in market at descent price

As it contains smart brain (Micro controller) it saves electrical energy and can run for longer period of time.

As it runs on 12-15V DC it can be simply powered from 12 V battery ,from car usb supply or from bike battery etc.

The dimension of refrigerator is and has 24cm x 16cm x 16cm storing capacity of 6.144 Ltrs.

# Annexure

## Interaction done by Pratik Bendre

Name of the User : Yash Aradhye

Profession : Studying Electrical Engineering & Part time Youtuber (Online Educator)

### Questions asked by User

1.) Will the Product work on car batteries?

Ans- Yes, as it requires 12V-15V to run, it can run on car batteries.

2.) If get damaged, will it be repaired easily?

Ans- Yes, as its parts are easily available it will be repaired easily.

### Suggestion for Improvements given by the user

- It can also be converted into an AC as the working for both is same and it can also be used like that for more convenience.

Update done to project as per the suggestion

- We have added a 120-watt SMPS to it, so it can work with AC power supply as well now.

## Interaction done by Utkarsh Kanawade with ENT Engineer Manas Uplekar & Lab technician of Suvichar Hospital Nashik

- ✚ What Temperature it can reach?
  - With proper insulation it can easily reach -5 degree Celsius with nothing inside
- ✚ How much time does single battery take to recharge?
  - A battery of 12V 10Ah can be charged in 1hr by a 10A charger and can power the refrigerator for more than 1hr.
- ✚ Does it have analog temperature Control, so that user can adjust Temperature we want?
  - It has a fully automated smart system made from Atmega328p microcontroller, it has a very consumer friendly interface, which provides them 5 modes, for storing fruits, for storing Coldrinks, for making ice, for making ice creams and custards, and a customized programmable mode in which user can adjust any temperature they want in the capable range of refrigerator.

## Suggestions

- 1) You should use 2 Peltier modules instead of one for fast cooling.
  - Sure, we can add it, that will require double power 240watt and it can cool a larger area in same time, at last the cost will increase.
- 2) You should increase the usable size.
  - Sure, we can do that but it will increase the cost of the refrigerator.
- 3) Tubes require for storing bottles.
  - Its interior can be customized by the user for various purpose.

1<sup>st</sup> ATTEMPT

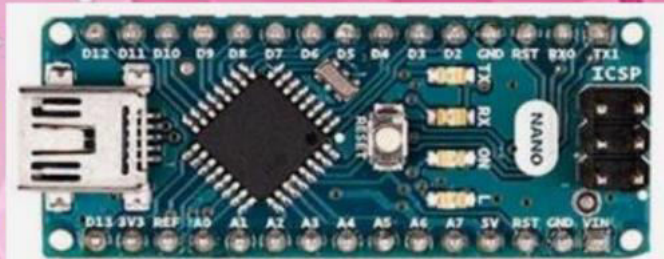

Project Title: Thermoelectric Refrigerator

## Identified Potential Users of Product

Used by People while travelling in car or any other Mobile Homes.

Used by Veterinary Doctors.

Used by Dentists.

Domestic Use in small houses.

Used by Chemists to store chemicals.

Used by Shopkeepers to store Cadbury Dairy Milk, etc.

Used by Pathologists.

Used by Fishermens to transpote fishes through small distances.

## Special Modification For User/Method of Use

We added Micro-Processor to make it fully automated so that everyone can easily use it.

We added a temperature Sensor to control its temperaure according to the requirements.

We added a LCD screen to display the live temperature and it will be easy for the user to toggle between modes.

We have used simple english for the display, so that it will be easily understandable to everyone.

We are going to provide a single page manual to control it.

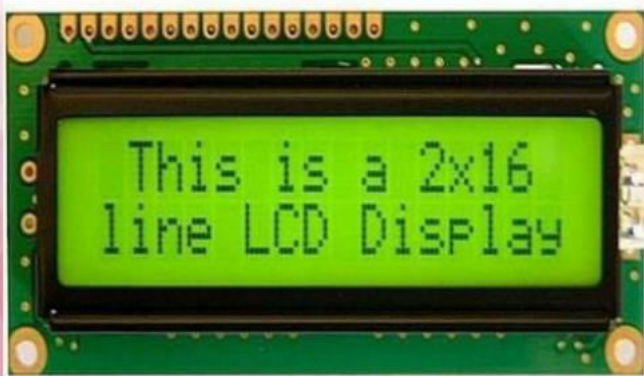

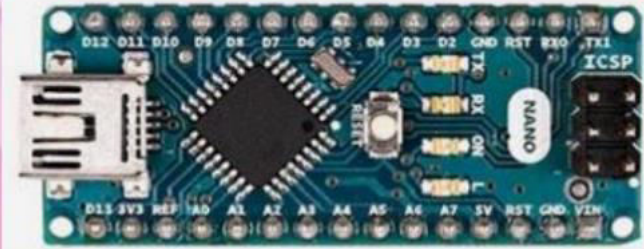

We added a 200 watt SMPS to power it from main AC supply

We have designed its software such that it can be updated in future as per the future requiremnts.

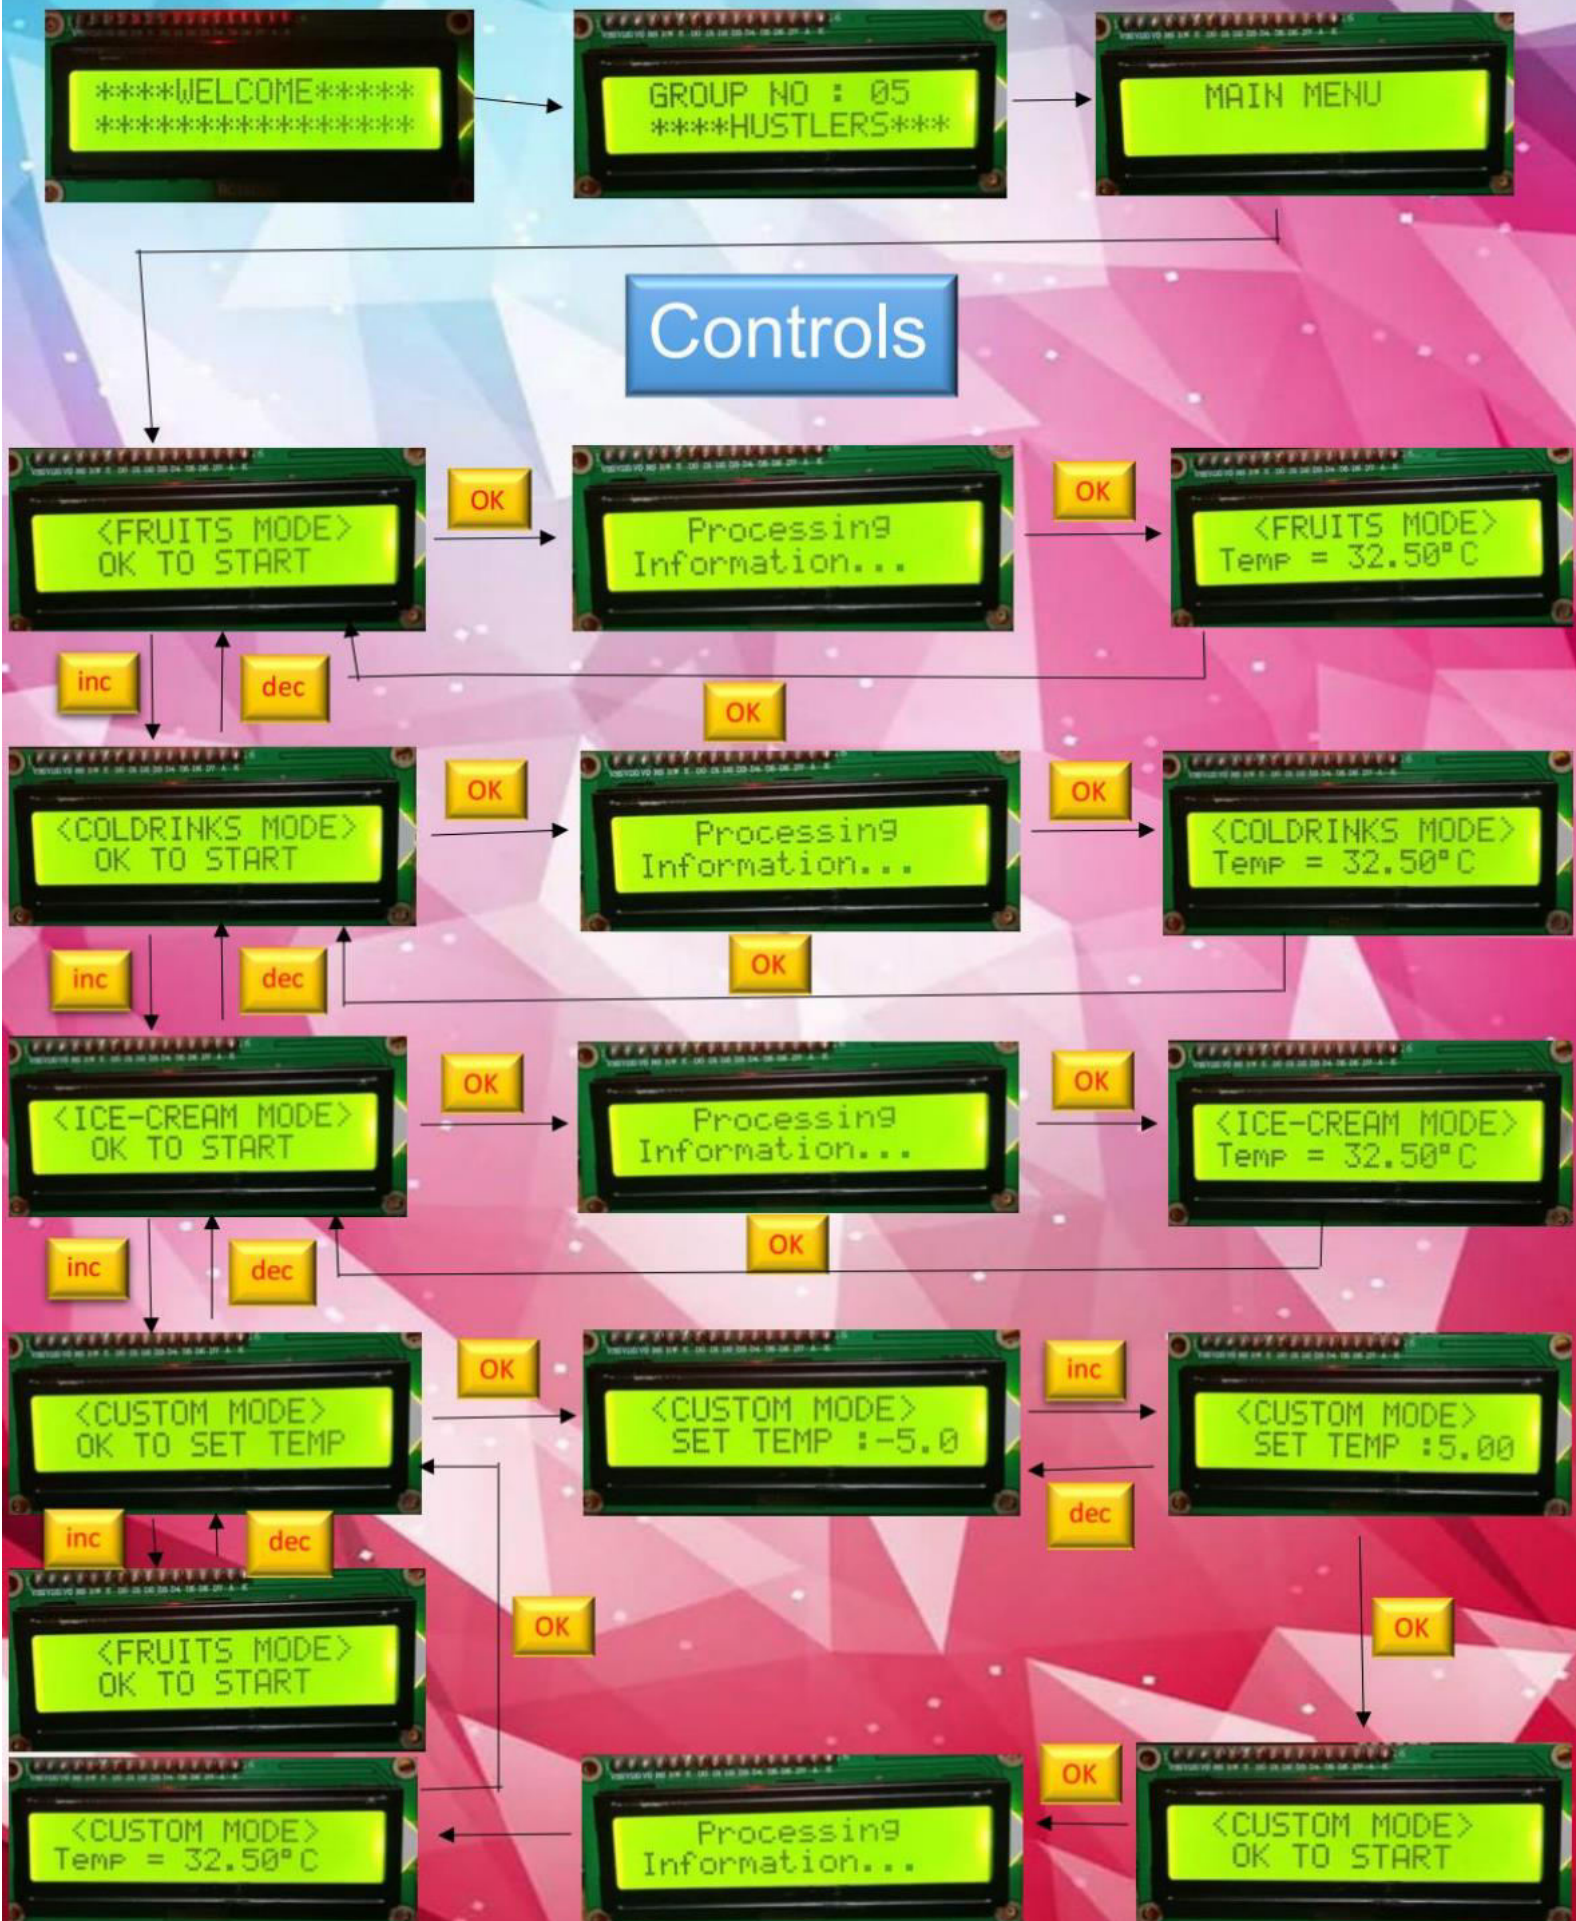

It has a smart switching mehanism which switches the power off when the required temperature is reached.

## The one-page manual of our Thermoelectric refrigerator

## Automated introduction and welcome screen

# EMPATHY CANVAS

## HEAR

The users were discussing about the following problems faced by them –

- Its thermal insulation is not good
- Sometimes the relay doesn't work
- Its storage capacity is less
- Its fan is produce noise.

## USERS

- Doctors to store medicines
- Chemists
- Used by casually peoples
- Used by fishermen
- used by dentist
- Used by shopkeepers to store chocolate.

## THINK AND DO

- Instead of connecting power directly to the supply ,we added a SPDT Relay so that we will be able to control the components from the Arduino
- instead of adding the door opening like a normal fridge we have made it like a ice cream storage freezer, so that the cold air wouldn't escape every time we open the fridge.
- We have added a separate supply line for each high power component, so if one fails to fuction, it won't affect others

## SEE AND FEEL

- There was a lot off noise coming out from the fan inside even after adding the rubber washers and tightening the screws
- We should have added a much more powerful SMPS for power supply
- We should have used rubber seals for even better heat insulation
- We should have added the potentiometer to control the speed of fans and power output of the Peltier device.

## SAD STORY

A group of friends went to a hiking trip they thought to carry a thermoelectric refrigerator with them so that they can enjoy the cold beverages on a camp fire, and they bought an fridge powered by solar panel, but later on their trip they faced a cloudy weather because of which they couldn't able to charge the fridge and it ruins their camp night.

## HAPPY STORY

A person just shifted to a new place, doesn't want to spend much for the house accessories because he didn't have much money. So he decided to bought a thermoelectric refrigerator which only consumes 200watt and it costs only around 8000 INR . For it was the perfect product because in less amount off money he was able to keep his food items fresh and also enjoy the cold drinks and he was very happy with its performance in the cost.

# IDEATION CANVAS

## PEOPLE

- Doctors to store medicines
- Chemists
- Used by casually peoples
- Used by fishermen
- used by dentist
- Used by shopkeepers to store chocolate.

## ACTIVITIES

- Cooling of the hotter side of the Peltier module.
- Spreading the cold air through out the refrigerator , for even cooling.
- Mode choosing by the user
- Relay switching off the Peltier device once the required temperature is reached.

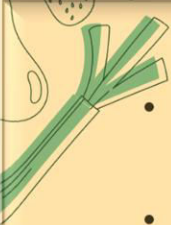

## SITUATION/CONTEXT/LOCATION

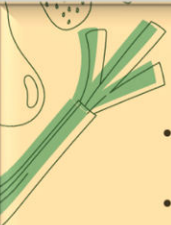

- Cold air was escaping through the small holes made to pass wires and attach screws
- Its door was a bit loose because of the irregular surface of XPS sheets (material used to build the body of the refrigerator)
- The resistance across the relay and all fans and Peltier device is higher than required , due to which it doesn't work sometimes
- A proper arrangement of wires with colour coding is required to reduce the mess made from wires.

## PROPS/ POSSIBLE SOLUTION

- Relay is provided with a separate parallel power line directly from the SMPS, so the voltage drop across it will be 12v so it can run and switch smoothly.
- Hot glue is used to seal all the cracks, holes and gaps in the body of refrigerator.
- A few layers of masking tape is used the make the surface look even and solve the fitting problem of the door.
- Screw terminals are added in various place to make the wiring look neat and clean, we also use standoffs to hide all the circuit wiring done on the perf board

# Some Questions ask by User

**Name : Kashiram wadile**

**Add : shirpur , Dhule**

**Question : Are there smartphone apps that will help me to determine when to irrigate?**

**Ans: Yes there are several smartphone apps that generates irrigation recommendations for its specific crop. Most useful features of the app is the ability to receive notifications when irrigation is needed.**

**Name : Machindra Kale**

**Add: shrigonda , Ahmadnagar**

**Question: I have heard that irrigation water use efficiency can be increased by irrigating at night?**

**Ans : It is true that irrigation water use efficiency can be increased by irrigating at night or during cool ,cloudy and windless conditions.**

**Name : Savata Ladkat**

**Add: shrigonda , Ahmadnagar**

**Question: How do soil moisture sensors help with water management?**

**Ans : The purpose of soil moisture sensor is to monitor soil moisture status, which allows the farmer to prevent plant stress by maintaining soil moisture at optimum levels.**

### Special Modification for user/ method of use :

IOT to save time

Improved cicuitry to save electricity

Removed unnecessary components to make it affordable

Modified sprinkler to increase coverage area

Increased sensitivity of moist sensors avoid water loss

Redesign circuit

# ADVANTAGES:

- It is simple, portable and provides high performance
- It consumes less power
- Dryness can be easily detected in soil
- Permits a non-expert to do the work of an expert
- Improves productivity by increasing work output and improving efficiency
- Saves time in accomplishing specific objective
- This system ensures that the plants do not endure from strain or stress of less and over watering
- This system saves labor cost and water up to 70%.

# HIGHLIGHTS OF THE PROJECT

- The operator does not require any previous training because of its user friendliness
- The operator is free from any technical issues. Extremely simple design makes the circuit easy to implement and maintain
- alternations in the system can be done easily if the process of the working changes in future
- System can be Operated at night, water loss from evaporation thus minimized
- Irrigation process starts and stops exactly when required. Thus optimizing energy requirements

# AEIOU FRAMEWORK : *Activity Sheet*

Things happening around the product concept:

- Fishing,
- Washing of clothes,
- Source of water Irrigation,
- Source of water for local Factory.

Effects of activity on product{special notes}:

This project can:

- Provide better income for local fishermen,
- Help in reducing Algae growth,
- Reduces Mosquito breeding,
- Enhances Aquatic life,
- Help in destratification

# A EIOU FRAMEWORK : Environment Sheet

## Season, Time, Personal, Location For Product:

- Will be used in all seasons
- Easy to operate and works on very less electricity
- Canal can be used as a source of water for washing clothes
- Huge habitat of birds like kingfisher, heron and for animals like mongoose
- Water level goes down in summer so deep oxygenation is required which can be done using deep level water fountain.

## Effect/Precaution For Product Based on Environment :

- By algae-proofing the surface exposed to sunlight , [click here](#)
- Once algae treatment is done and cleaning the environmental debris is cleared then mosquito breeding will be under control
- As the water level goes down in summer season and we need deep level oxygenation to keep the environment clean we need to implement fountain structure which is deep level instead of surface level
- By using energy efficient motor, we can save water and electricity

The water level is higher during rainy season and water level decreases in summer season

The water level is increased but due to stagnation, algae is grown but spreads only during rainy seasons

# AEIOU FRAMEWORK : Interaction Sheet

## Users Expectation About Product:

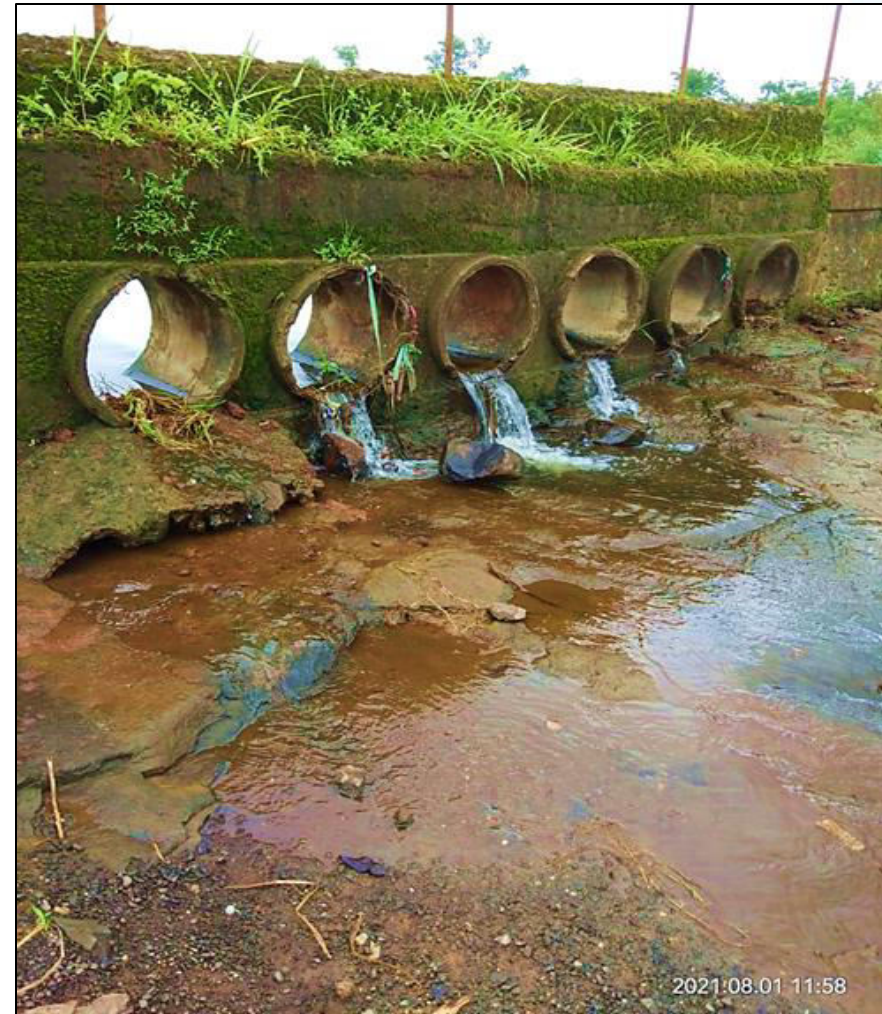

- Damage to pump
- Cost effective
- Should not use much electricity
- Aquatic bodies should not be harmed
- Should not contaminate drinking water supply

## Summary of Interaction :

- Helps in oxygenation of water
- Ph level of water is fine
- Reduces algae growth and mosquito activity
- Adds as a beauty to the area
- Enhances aquatic habitat
- Better income source for fishermen
- Helps in destratification

# AEIOU FRAMEWORK : Object Sheet

List of materials needed :

- Submersible water pump,
- Solar generator,
- Rigid pvc pipes,
- Stepper motor,
- Flooding cables

What is the solution {project} ?

PROJECT IDEA : [\[4\]](#)[\[5\]](#)[\[6\]](#)[\[7\]](#)

1. We can make a square shaped fountain system that will be used as aerators and take water from the deepest level of the lake.
2. Submersible water pump will be used for pumping water.
3. Solar generator will run the motor .
  - *NOTE : this project is supposed to be running only during daytime to conserve energy and not creating an extra expense on battery.*
4. Rigid pvc pipes are used to make the model sturdy.
5. Stepper motor is used to rotate the water in specific positions { only to add scenic beauty }.
6. Flooding cables are used to make necessary electrical connections underwater.

How much will this project implementation cost ?

- Submersible water pump of 3 Hp power: [CLICK HERE](#)
- Solar generator : [CLICK HERE](#)
- Rigid pvc pipes : [CLICK HERE](#)
- Stepper motor : [CLICK HERE](#)
- Flooding cables : [CLICK HERE](#)

**TOTAL SUM : ₹1,97,508.333**

# AEIOU FRAMEWORK : Object Sheet

Who can finance the project if implemented ? [\[2\]](#)[\[3\]](#)

ITC's Policy to direct its CSR Programmes, inter alia, towards achieving one or more of the following - poverty alleviation; promoting education and skill development; promoting healthcare including preventive healthcare; providing sanitation and drinking water; ensuring environmental sustainability; enabling climate resilience; rural development projects; creating livelihoods for people, especially those from disadvantaged sections of society; protection of national heritage, art and culture; preserving and promoting music and sports; and providing relief and assistance to victims of disasters and calamities.

- Under the Rural – development projects :

Agri extension services and farm productivity enhancement measures

- Amount allocated for the program : ₹ 56,16,00,000.

BUDGET OF OUR PROJECT : TOTAL : ₹ 1,97,508.333.

# AEIOU FRAMEWORK : User Sheet

Identified potential users of the product:

1. Local Fishermen
2. Local Farmers {Paddy Farmers}
3. Villagers

Special modifications:

Solar generator will run the motor

- *NOTE : this project is supposed to be running only during daytime to conserve energy and not creating an extra expense on battery.*

# EMPATHY CANVAS

## HEAR

The problems faced by the users are : [\[8\]](#)[\[9\]](#)[\[10\]](#)[\[11\]](#)[\[12\]](#)

1. Oxygen level of water is depleted,
2. Phosphates {present in detergents} also pollute the water and make it harmful for the aquatic life,
3. pH of water is depleting,
4. Excessive Algae growth,
5. Excessive dredging,
6. Excessive weed growth,
7. Foul odor caused due to hydrogen sulfide gas,
8. Aquatic ecosystem is disturbed,
9. Thermal Stratification of water,
10. It has become a Mosquito breeding ground.

## USERS

1. Local Fishermen
2. Local Farmers {Paddy Farmers}
3. Villagers

# EMPATHY CANVAS

## THINK AND DO

- Instead of having a diesel running generator , we decided to have a solar generator which eliminates the running cost.
- Instead of running this project 24 hour, we will be running this project only during the daytime to conserve energy and cutting the extra expense on battery

## SEE AND FEEL

- We can also add cleaning pad between the side or bottom of the fountain basin and the pump. A pump that touches the fountain basin may vibrate against it and make noise. Inserting a cleaning pad as a barrier can help minimize these loud vibrations.

### SAD STORY

One fine day, the local fishermen of Talegaon had gathered near the lake for fishing and to their shock, dead bodies of fishes were floating in the lake.

Many more fishes are on a verge of dying due to the huge rise in the phosphates of the water (present in detergent) thus contaminating the lake.

Fishermen had to remove several dead fishes and there was a huge loss in the market.

### HAPPY STORY

It was a regular day after the implementation of the aeration system and there was visible positive changes in the aquatic life of the lake.

Fishes were healthier and thus the fish market expanded, and the income of fishermen had increased significantly. Local fishermen were very happy with the healthy environment.

# IDEATION CANVAS

## PEOPLE

- Local Fishermen
- Local Farmers {Paddy Farmers}
- Villagers

## ACTIVITIES

- Fishing is one of the primary activities
- people use this lake to wash their clothes
- This water is also used for irrigate the crops
- This water is used by factories

### SITUATION/CONTEXT/LOCATION

- This project can be used in all seasons
- It consumes less amount of electricity
- Also, this is easy to operate
- If the water level decreases, then we need deep level oxygenation which can be done by adding a submersible oxygenation system.

### PROPS/POSSIBLE SOLUTION<sup>[4][5][6][7]</sup>

- We can make a square shaped fountain system that will be used as aerators and take water from the deepest level of the lake.
- Submersible water pump will be used for pumping water.
- Solar generator will run the motor
- Flooding cables are used to make necessary electrical connections underwater.
- This project will be implemented right in the middle of the lake at the deepest point
- This project is going to use solar energy and will be working only during daytime.
- No, the aquatic life will not be harmed in this project.

# PRODUCT DEVELOPMENT CANVAS

## PURPOSE

1. Dissolved oxygen increases to healthy levels,
2. Water keeps on circulating within the lake,
3. Thermal and Oxygen Stratification are eliminated,
4. Biological processes start to reduce the muck layer,
5. Nutrient balance is restored,
6. Reductions in algae and weed growth,
7. Foul Odors are eliminated,
8. No longer a breeding ground for Mosquitoes,
9. Fish habitat is restored,
10. pH of the water is restored to healthy level.

## COMPONENTS

1. Submersible water pump,
2. Solar generator,
3. Rigid pvc pipes,
4. Stepper motor,
5. Flooding cables

## CUSTOMER REVALDATION

1. This project works in all seasons.
2. It works on less amount of electricity
3. Also, this is easy to operate

# Empathy Canvas

## Hear

The user were discussing about the following problems faced by them:

1. There is less cabinet for storage of vegetables and fruits.
2. Vegetable gets rotten in especially in rainy season.
3. The cart is hard to clean.
4. The cart doesn't have roof to protect vegetables and fruits from sunlight and rain.
5. It has fuel expenses.
6. It requires more space for parking.

## Users

1. Vegetable Vendor
2. Fruit Vendor
3. Farmers
4. Juice vendor
5. Manufacturer
6. Greengrocer
7. Market Owner
8. Common people

## Think and Do

1. Instead of using that gunny wet bags we have used cabinets to avoid spoilage of vegetables.
2. For power supply of refrigerator and roofing purpose, solar panel is used.
3. For avoiding uncleanliness in surrounding, dustbin is attached with the cart.
4. After defrosting the refrigerator, drainage valve is provided as an outlet.

## See and Feel

1. By seeing gunny wet bags, we feel that it should be replaced by cabinets to avoid spoilage of vegetables and for keeping them fresh for a longer period of time.
2. We observed that vegetables and fruits were getting spoiled over a period, hence refrigerator was added.
3. As a power source for this refrigerator, solar panel was added.

# Happy Story

Raju was a fruit vendor and he used to sell the fruits in market areas and in colonies with the help of a hawker. He has good marketing skills and he always made a good income. From his hard work he bought a nice home for his family and also a shop for selling his fruits and vegetables. And he lived his life happily.

# Sad Story

Ram was a vegetable vendor and had a simple vending cart. Once, Ram was selling vegetables roaming on local streets and it started raining heavily. He was not having anything to cover vegetables and fruits and all of the vegetables and fruits were rotten after some time. He was also not having refrigerator to store vegetables to protect them.

3. Arranging vegetables
4. Weighing
5. Packing
6. Protecting vegetables from animals
7. Cutting vegetables
8. Carrying vegetables
9. Counting money
10. Maintaining hygiene

Sr. No.	Situation/Context/Location 	Props/Possible Solution 
1	Facing problems while parking the cart.	Added detachable cart and bicycle
2	Due to humidity, vegetables and fruits gets watery and after defrosting the refrigerator water has no outlet.	Added a drainage valve as an outlet
3	Facing problems of power supply	Added solar panel for power supply of refrigerator
4	Facing problems of storage of weighing machine	Added special cabinet for weighing machine

# Product Development Canvas

## Purpose

1. Customize Special cabinets for storage
2. Purpose to have drainage valve providing an outlet for defrost water.
3. Also for purpose of parking ,cycle and cart can be detached.

## Components

1. Cabinets
2. Dustbin
3. Nuts and bolts
4. Refrigerator
5. Solar Panel
6. Bicycle
7. Led Bulb

## Customer Revalidation

1. It is easy to arrange vegetables and fruits.
2. Innovative Technology  
i.e.App for vegetable and fruits
3. Easy for transportation.

## People

1. Vegetable Vendor
2. Fruit Vendor
3. Farmers
4. Juice vendor

## Product Features

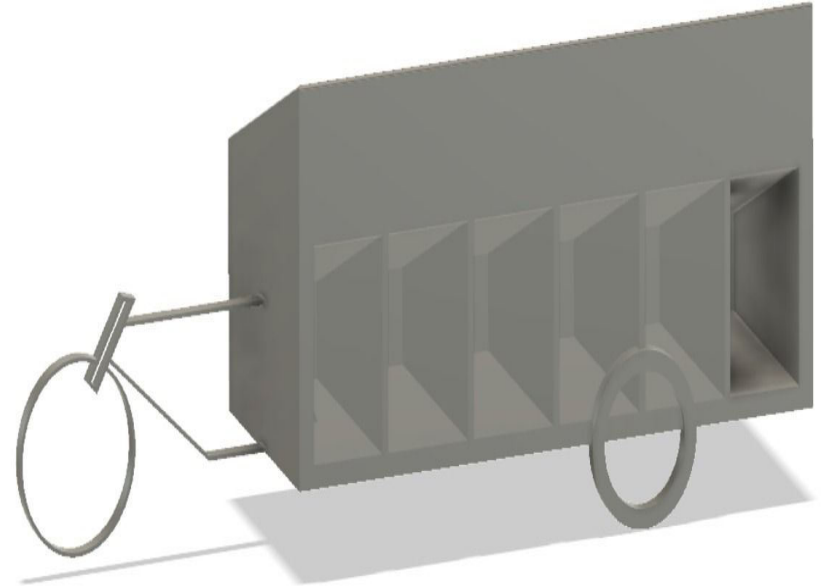

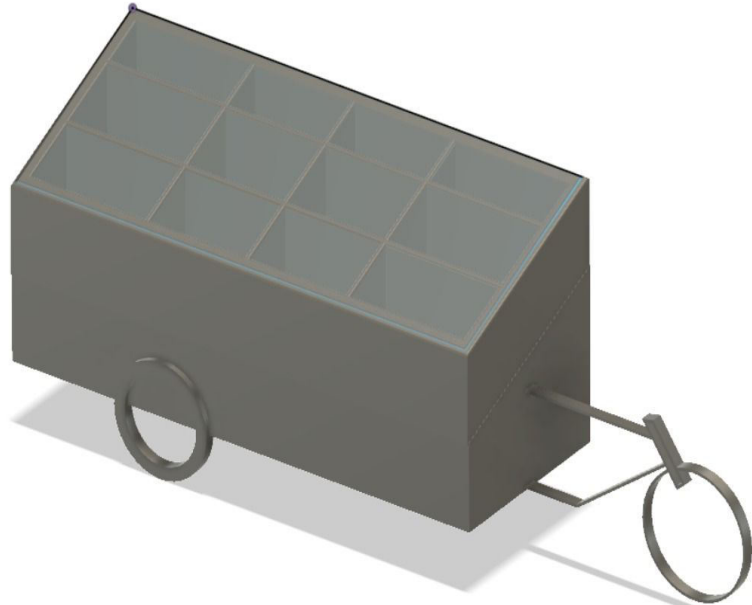

1. Efficient storage
2. Power efficient
3. No pollution
4. Has solar panel
5. Have a dustbin attached
6. Lights

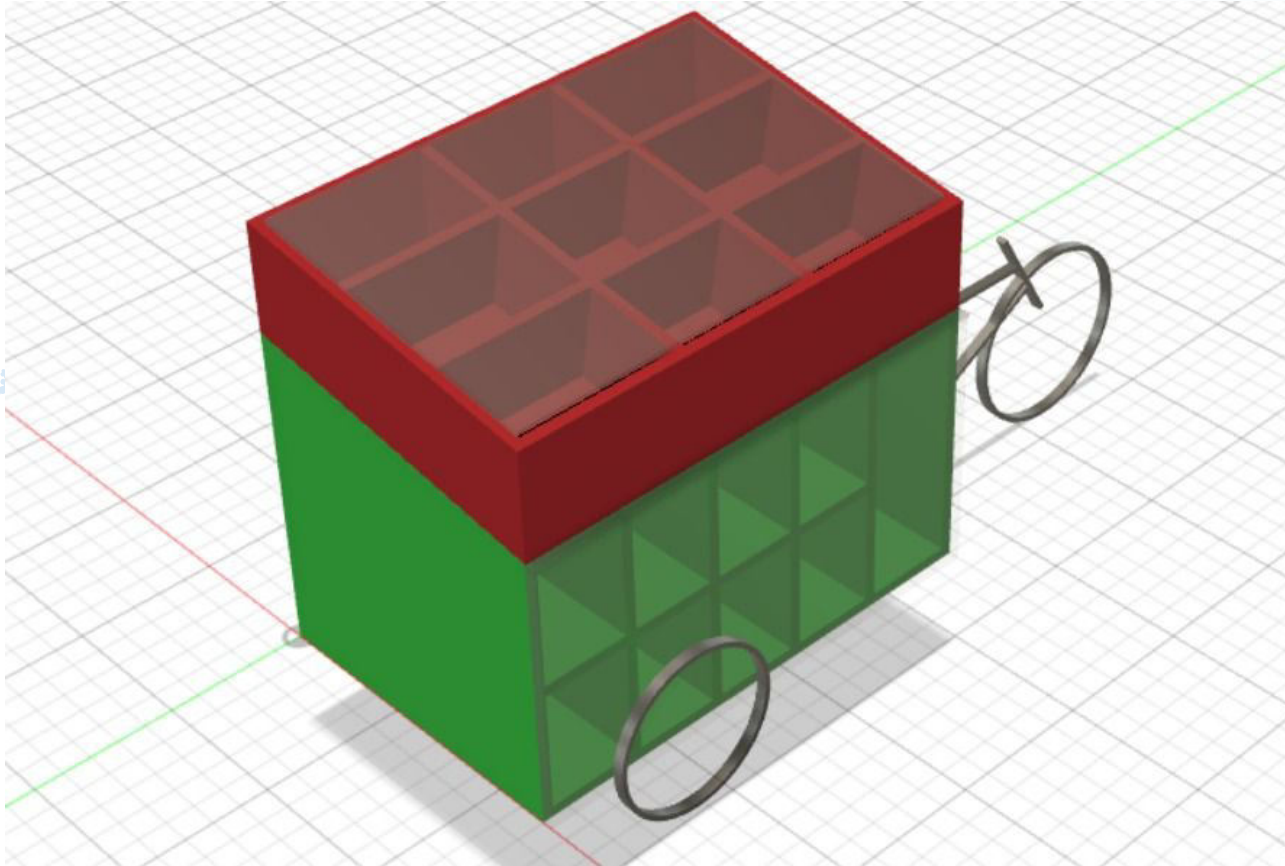

## Product Experience

1. Low maintenance
2. Handy
3. Extra storage
4. Easy to arrange products
5. Fresh for long time vegetables

# EMPATHY CANVAS

## HEAR:-

- It utilises lots of petrol/diesel.
- The Machine is very costlier.
- Machine is risky for user to use it.
- It requires High Maintenance.
- There is no Storage capacity.
- It gets corroded.
- No Alternating power source.

## USERS:-

- Farmers
- Labours
- Manufacturer
- Vendors
- Industrialist
- Entrepreneur
- Local People
- Companies
- Workers

## THINK AND DO:-

- We used Dryer because the grains get sticky, so that with the help of dryer we could dry them.
- Covering is necessary at the entrance of the machine so that it prevents from all the dust particles and climatic conditions.
- Instead of Bamboo we can use conveyer belt which will help the millets to get easily into the machine.
- We have to use staircase to reach at the entrance of the machine easily.
- As the Machine gets heated up easily there is a requirement of a cooling fan in order to cool it.
- For more power help we can use solar panel.

## SEE AND FEEL:-

- It was observed that dryer was not able to dry the grains completely.
- Due to the addition of conveyer belt and solar panel the cost of machine increases.
- By using the staircase the machine gets wider in area.
- For using the cooling fan extra power source is required.

STORIES:

## Sad Story:-

Once a day a labour was on the farm and was using the dehusking machine and was putting some millet into it but after sometime the machine started clogging. Then the labour took the bamboo and put it into the machine for unclogging it but the bamboo got stucked into the machine and it went uncontrolled for him and he got pulled by the machine and his hand got stucked in it but other labour pulled him and saved his life, but he lost his one arm.

## Happy Story :

Once upon a time there was a farmer who was having a farm of millets and his farm was favourable for production of millets. Every year he used to suffer a heavy loss by paying wages to labours for dehusking the millets. Also it was a time consuming process. Then he came to know about Dehusking machine and he went for the one time investment and bought it. Now he earns more profit than earlier and its time saving.

# IDEATION CANVAS:

## People:-

- Farmers
- Labours
- Manufacturer
- Vendors
- Industrialist
- Entrepreneur
- Local People
- Companies
- Workers

## Activities:-

- Dehusking
- Separation of Grains and its coatings.
- Drying Grains
- Loading Millets
- Unloading Millets

## SITUATION/CONTEXT/LOCATION:-

- PORTABLE MACHINE
- CAN BE ACCOMMODATED ANYWHERE
- IT DOESN'T REQUIRES ANY SPECIFIC TIME TO USE,WE CAN USE IT WHENEVER IT REQUIRES.
- NORMALLY ANYONE CAN USE THIS WHO HAVING KNOWLEDGE ABOUT IT.
- WE CAN USE THIS MACHINE IN ANY SEASON, IT IS EASILY ADAPTABLE TO ALL SEASON

## PROPS/POSSIBLE SOLUTION:-

- CONVEYER BELT IS PROVIDED AVOID THE DIRECT CONTACT BETWEEN PERSON AND THE OPENING.
- EXTRA COVERING IS ALSO PROVIDE TO PROTECT IT FROM RAIN .
- ADDITIONAL COMPARTMENT FOR STORING THE MILLETS IS GIVEN .
- STAIRCASE IS VERY USEFUL FOR PEOPLE FOR STANDING.
- POLISHING UNIT HELPS TO OBTAIN FINE INDUSTRIAL GRADE OUTPUT

# PRODUCT DEVELOPMENT CANVAS

## PURPOSE:

- Safety to user and they will work comfortably.
- Because of extra storage system we can use it continuously
- Solar and electrical power source help mechanism to work more efficiently.
- Millets which enter in the machine must be dry, so machine work properly.

## COMPONENTS:

- Sieves
- Mortar pans
- Axial
- Connecting rod
- Blades
- Blower
- Metal Sheet
- Bamboo
- Tyres

# CUSTOMER REVALIDATION:

- It is easy to use operate
- It is very safe to use
- Require less man-work
- Can work for more time because it doesn't heat ups

## PEOPLE:

- FARMERS
- LABOURS
- MANUFACTURERS
- ENTREPRENEURS
- VENDORS
- INDUSTRIALISTS
- LOCAL PEOPLE
- COMPANIES

## PRODUCT FEATURES:

- Requires low maintenance.
- Suitable for any terrain.
- Can be used for wet millets.
- No skilled person necessary to operate the machine.

## PRODUCT EXPERIENCE :

- Staircase provide platform to work efficiently.
- Extra storage compartments increases the production.
- Solar and electrical power source reduces the use of fossil fuels.
- Lids provide more safety to users.

## REJECT, REDESIGN ,

### RETAIN:

- Adding staircase increases the area of machine.
- Cost is also increased.
- Solar power has reduced power usage

# **Advantages**

- ✓ **It reduces human efforts and saves energy.**
- ✓ **It is easy to handle and operate.**
- ✓ **It saves a lot of time.**
- ✓ **It's maintenance is easy and non-costly.**
- ✓ **It is an affordable machine.**
- ✓ **It requires very less space.**
- ✓ **It is portable.**

## **Highlights of the project**

- **This product is very useful as it reduces human efforts, saves energy, easy to handle and operate.**
- **Also it is a low cost product with almost negligible maintenance.**
- **It is compact and portable.**
